2.0 Objectives of the Project

TechFit is an online skill assessment platform designed to revolutionize the recruitment process for both job seekers and employers in the IT industry. The primary goal of TechFit is to provide IT job seekers with opportunities to demonstrate their technical proficiency, experience, and unique strengths through a multi-stage assessment process. This process includes targeted questions, coding challenges, personality assessments, and work-style evaluations to build a comprehensive and dynamic candidate profile.

The platform allows job seekers to detail their expertise in popular programming languages like Python, JavaScript, Java, and C++, rating their proficiency levels and allowing job seekers to showcase their projects as testaments of experience. Additionally, TechFit encourages candidates to share their preferences regarding company culture, and work-life balance, creating a holistic profile that resonates with their professional goals. Candidates can further enhance their profiles by linking external resources such as LinkedIn or personal portfolios, increasing their visibility to potential employers.

For employers, TechFit provides a centralized hub to access a pool of highly qualified candidates tailored to their hiring needs. TechFit enables employers to quickly identify individuals who align with their technical requirements, personality traits, and company culture by seamlessly browsing through the catalogue of job seeker profiles. This comprehensive approach allows employers to make informed decisions, streamlining the hiring process and reducing the time and effort traditionally spent on recruitment.

With its dual-focused approach, TechFit empowers job seekers to showcase their potential by completing assessments while helping employers find the right talent efficiently based on the assessment results of potential candidates. By bridging the gap between opportunity and talent,

Prep. ETS

TechFit fosters a more effective, personalized, and streamlined hiring ecosystem for all stakeholders.

Inside Assessment Page

Given a list of integers, identify the function of `find_missing_numbers` that correctly finds all integers missing from the range defined by the smallest and largest numbers in the list.

A Returns a sorted list of missing numbers in the range.
B Finds duplicate numbers in the list.
C Returns the sum of missing numbers.
D Checks if the list is a complete range.
